

- High Quality Microorganisms
- Fed on Home Grown High Quality Fresh Algae
- Hand Reared, Washed and Screened
- No Finishing Diets or Excess Nutrients!

## Copepods & Rotifers

*Harpacticoida Tigriopus japonicus*  
& *Brachionus plicatilis* (L)

**PhytoPilot** produces high quality microorganisms for your aquaria. Our zooplankton are highly nutritious and are fed on a diet of high quality algae. Our expertly blended feed is a balanced diet of fatty acids, dyes and essential minerals providing your aquaria occupants with a feed that is closer to their natural diet.

All our zooplankton products are washed and screened to ensure no unwanted organisms.

## Copepods :: *Tigriopus japonicus* (*Harpacticoida*)

Size :: 0.1 - 1000µm, Salinity :: 30ppt (30g/l) Phosphate free saltwater

## Rotifers :: *Brachionus plicatilis* (**L type**)

Size :: 0.01 - 50µm, Salinity :: 30ppt (30g/l) Phosphate free saltwater

Our microorganisms are hand reared here at PhytoPilot. In indoor tanks, we ensure that you get the best feed you need. They are fed on a balanced, carefully targeted diet of algae. They are naturally high in fatty acids, omega 3-6, dyes, vitamins and nutrition. No need for finishing diets - they are ready to go as food for your aquaria and animals. We also carefully harvest and screen so you get the full range of adults and juveniles, with very little debris and dirt. After harvest all our organisms are carefully hand washed and sent to you in phosphate-free salt water.

**How to care for your product:** When you first receive your organisms, open the container to let the air circulate. Keep them in a cool place but they will tolerate sunlight and cold weather. If you want to keep your culture longer, feed with fresh algae. Copepod adults can live for a couple of weeks.

We believe in providing as much nutrition as possible for you. Our harvesting protocol doesn't mean you just get adults, it provides you with a variety of different sizes and stages of growth in every batch. That way you get different scales of food for a variety of different animals and a self-sustaining feed which keeps for longer!

*Our copepods are so well fed they are full of colour! Male copepods will be red and females will be blue-green with a visible egg sack!*

PhytoPilot inspired by Cwm Harry are producers of high quality algae concentrates and microorganisms. We provide live, high quality products to give a pure and natural food. We don't use preservatives and we harvest at peak-nutritional value. To find out more, contact your supplier!
